

BUSINESS SECURITY & BEST PRACTICES

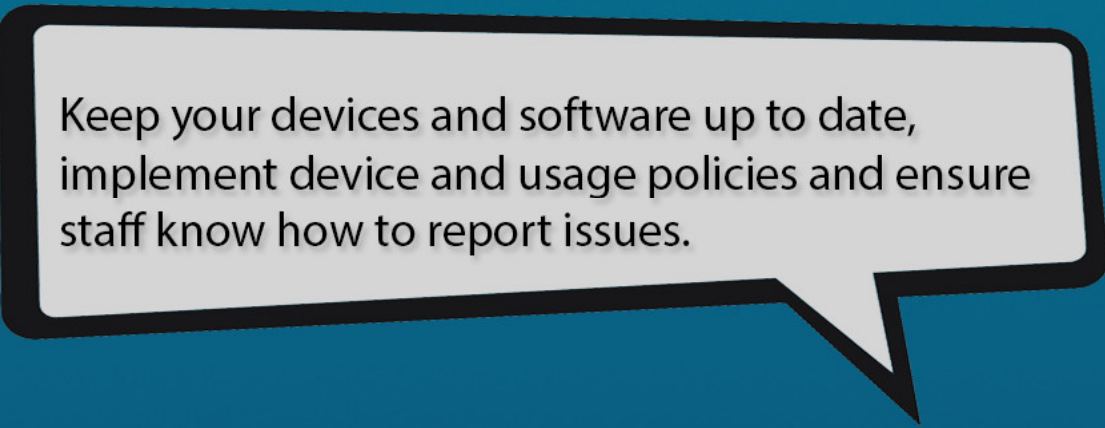

Criminals will try to access your device or network in a number of ways. They can do this by:

- Sending emails with malicious attachments.
- Exploiting vulnerabilities on non updated devices.
- Trying to get you to click links or visit fake sites.

WHAT CAN I DO...?

Help staff by educating them on the risks to your business. Support the use of strong passwords, help them to identify suspicious emails, and provide guides on how to stay safe.

Keep your devices and software up to date, implement device and usage policies and ensure staff know how to report issues.

TOP TIP

Avoid using generic email providers. Register your own domain for better security and a personal business email!
